

ITC 5103 – Lab 9

Description: For this lab, you continue improving the Halloween Store website.

- 1- Create a personal page that contains a video. To create the personal page, you can copy the index.html file from previous labs to the personal folder. Then, you can delete the content from the section and modify the URLs on the page as necessary. (So, you need to create a personal sub-folder including an index.html).
- 2- Modify the horizontal navigation menu so it indicates that the personal page is the current Page as shown on page 2.
- 3- Modify the vertical navigation menu so it provides the links shown on page 2. Use any names you want for the pages but assume that they're stored in the personal folder.
- 4- Create a new style sheet named personal.css for the personal page and copy the styles you need from the main.css file. Then, modify the link element for the style sheet in the personal/index.html file so it points to the correct style sheet.
- 5- Add a heading and the video to the section. Provide for the MPEG-4 media type and provide a Flash file as fallback in case a browser doesn't support the video element. You'll find the video files you need in the media folder.
- 6- Add any other formatting as necessary so the page looks as shown on page 2.
- 7- Use the Google Web Fonts page (www.google.com/fonts) to get the link element for using the Creepster font. Copy this link element into the head section of the personal page.
- 8- Apply the Creepster font to the first heading in the header as shown on page 3.
- 9- Add the story to the personal page, and format it as shown on page 3. You'll find the text for the story in the story.txt file in the text folder.
- 10- Add the required code to the personal.css style sheet to provide serif font for the text of the story and author's name. The heading of this story should be bolded and in sans-serif. (See the final look of this page on page 3).
